

## Website Design/Development Offer

We hereby want to present you with an offer for web design and web development of a small website. This is a small package that includes everything necessary to get you started with your own website. No knowledge of websites or the Internet is required because we will do everything for you. Here is what we can offer you:

### Full Website Package – Price \$700

This package includes the following elements:

#### Domain Registration

We will register your domain for you for one year and we will do all the necessary tweaks to the DNS server settings so they reflect the hosting server settings.

#### Web Hosting

We will provide you with affordable yet state of the art hosting and we will setup your account and your website for you.

#### Web Design

This is the actual “look and feel” of the website. Once we do the design of the website, we will send it to you for approval. You are entitled to 3 revisions of this design.

#### Web Development

After we’ve agreed on the web design, we will continue with the actual development of the pages of the website. You will have to provide us with all the content for the website, including the text and the images. You can deliver the text to us in an MS Word file or even a Notepad file. The images that you deliver to us don’t need any special formatting, we will do that.

This offer is limited to **5 (five) web pages** and does **NOT** include the design of a logo, or any custom programming. This means that you will need to provide us with your own logo, or we can design one for you for an additional charge.

## Additional Services

**Logo Design** - \$300

**Additional Web Page**- \$100

**Custom Programming** – Contact us for a quote.

**Annual Domain Registration Charge (after the first year is over)** - \$15

**Annual Hosting Charge (after the first year is over)** - \$200 (see hosting details below)
